CYBER THREAT INTELLIGENCE ANALYSIS

Definition of training:

"The Cyber Threat Intelligence Analysis" is a training program which was designed and developed in collaboration with the world's cybersecurity and threat intelligence experts to help organizations identify and mitigate business risks by transforming unknown internal and external threats into known threats. It is a comprehensive program that teaches a structured approach to creating effective threat intelligence. It is a highly interactive, comprehensive, standards-based, 3-day intensive training program that teaches information security professionals to create professional threat intelligence. Organizations today demand a professional-grade cybersecurity threat intelligence analyst who can extract intelligence from data by applying a variety of advanced strategies. Such professional-level programs can only be achieved when the core of the curriculum is aligned with the threat intelligence frameworks published by government and industry. CTIA* is a method-oriented program that uses a holistic approach, covering concepts from planning a threat intelligence project to creating a report and disseminating threat intelligence. These concepts are essential when creating effective threat intelligence and when used correctly, can protect organizations from future threats or attacks. This program addresses all phases in the Threat Intelligence Lifecycle.
